► **Photographer:** Justin Anderson, project engineer, Rafn Co., Bellevue, Wash. **Submitter:** Jennifer O'Rear, Rafn Co.

Against a foreboding Seattle sky, castellated steel beams are flown in by crane as the four-story Terry and Thomas office building tops out. Anderson caught the moment as the last few beams were brought in. Anderson decided to photograph the steel erection because "we were putting up all this steel and realized we had no good photos of the work," he says. Castellated beams are used throughout the structure to reduce weight and materials and to be more eco-friendly.
